### Setting the time and date

Unscrew the crown by turning anti-clockwise.

Position 1 is for winding the power. Wind the crown in a clockwise direction to re-power the watch.

Pull the crown gently into position 2 and turn the crown in a clockwise direction to the desired date.

Pull the crown gently into position 3 and turn the crown in a clockwise direction to move the time forward and anti-clockwise direction to move time back.

## Strap fitting/options

The Icon models can be fitted with a leather strap, polymer strap, one-piece webbing or a stainless steel bracelet

With a 22mm lug width and 22mm spring bar fixing, straps are easily interchangeable using a forked spring bar tool. Many 22mm aftermarket straps are also compatible\*

The Icon straps exclusively available through nitewatches.com can be found here:

<https://www.nitewatches.com/store/gb/straps/icon>

The stainless-steel bracelet can be adjusted in length by adding or removing links and by also using the 3-micro adjustment on the buckle part of the strap.

## Taking care of your automatic watch

Your automatic watch utilises a combination of intricate components working in unison to translate the motion of the wearer into stored energy to power the movement – truly connecting the timepiece with its owner.

Daily wear will ensure your automatic watch operates at optimum performance. Where required you may wish to consider the purchase of a watch winder.

We recommend that you have your automatic watch serviced every five years. Regular maintenance will ensure your watch remains clean and well lubricated, providing a lifetime of use.

*\*Nite Watches accept no responsibility with the sizing and fitting of any aftermarket straps.*
